

# Pause CloudToolz Operation

To pause CloudToolz, the workflows are the key components that must be stopped.

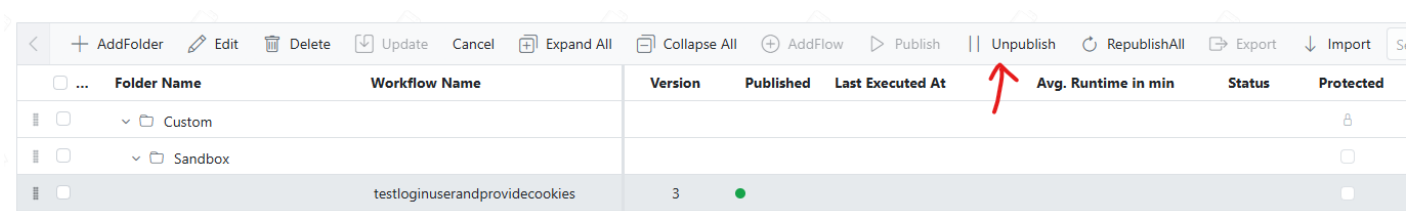

Once logged in, navigate to **Flowz -> Definitions**

The screenshot shows the ZENTSO Flowz Definitions interface. The left sidebar contains navigation options like 'advise Pro', 'Flowz', 'Definitions', 'History', 'Monitoring', 'Experience Engine', 'Data Handling', 'Settings', 'Logs', and 'About'. The main area displays a table of workflows with columns for Folder Name, Workflow Name, Version, Published, Last Executed At, Avg. Runtime in min, Status, Protected, CRON, and Endpoint. The workflow 'testloginuserandprovidcookies' is highlighted in grey.

Folder Name	Workflow Name	Version	Published	Last Executed At	Avg. Runtime in min	Status	Protected	CRON	Endpoint
Custom									
Sandbox									
	testloginuserandprovidcookies	3	●						/testloginu...
		1	●						/test/get-gr...

	Test IQA	2	●						/test/smi/qa...
	Courses: Get Offering Id	1	●	20 Jun 24 15:49:50	0	●			/esc/offerin...
	SMI: Get Person (testing)	1	●						/esc/smi/pe...
	Get event (test)	1	●						/esc/offerin...

Each workflow must be selected individually so they are highlighted in grey and select "Unpublish".

This close-up screenshot shows the top part of the workflow table. The 'Unpublish' button in the toolbar is highlighted with a red arrow. The workflow 'testloginuserandprovidcookies' is selected and highlighted in grey.

Folder Name	Workflow Name	Version	Published	Last Executed At	Avg. Runtime in min	Status	Protected
Custom							
Sandbox							
	testloginuserandprovidcookies	3	●				

The checkboxes on the far left cannot be used. Each workflow has to be selected and unpublished individually as multi-select is not supported for this function.

To resume operation, repeat the same steps outlined above choosing to "Publish" each workflow instead.

Revision #3
